

6. Reindeer are usually 4-5 ft tall not including their antlers. Their antlers are 3ft tall!
7. Did you know that reindeer are the only deer in which both male and females grow antlers. They shed their antlers in the winter. Reindeer antlers are actually rubbery, living masses of blood and marrow when they are growing. The antlers grow until around August, then the bone begins to harden.
8. Like a human's fingerprint no two reindeer antlers are exactly the same.
9. Reindeer migrate, during the winter reindeer's migrate south, during the summer they migrate north. The trip is 1200 miles round trip. That is one of the world's largest migrations.
10. Their hooves are used to dig for food in the snow. The outer edges of their hooves are sharp which help them walk on ice and rocks. Reindeer's have an ankle tendon which rubs over a bone causing a clicking sound when they walk. That clicking sound helps the reindeer keep track of each other especially when they can't see in bad weather.
11. Did you know that reindeer can run 50 miles per hour!
12. A male reindeer is called a bull.
