

Use of the color wheel

Here are four ways to use this color wheel. Do remember though, a color includes all tones of that color.

1. Use several tones of the same color for subtle, harmonious schemes.

2. Use colors opposite each other for maximum-contrast schemes. These colors vibrate.

3. Use colors at the three corners of an equilateral triangle for rich harmony...

4. Use four colors from one half of the wheel, and a fifth color from the other half.
